

NEAT PRODUCTS AT LIGHT & BUILDING 2018: Specialty Lighting Industries and others

Specialty Lighting Industries, Targetetti, SLD Laser, Sylvania, Wila, XAL, TCI, Eulum displayed versions of LensVector, the company that offers dynamic beam shaping with no moving parts, technically it is called solid state molecular beam shaping. Think of your iris adjusting in your eye.

Specialty Lighting Industries, demonstrated a luminaire and changed the beam angle from 60° to 10° simply with a phone app. They also demonstrated color tuning and dimming with the same fixture. Some of the technology currently exists in the Specialty Lighting line of products, while other technologies will be implemented in the near future with our newer products.

Specialty Lighting Industries exhibit booth, was well recognized with existing and potential new customers at Light & Building 2018. Many designers enjoyed the Graffiti wall where they were able to tag the Graffiti wall. The wood trims were also a highlight of the show. Overall, Light & Building 2018 was a success for SLI and the feedback was positive towards our newer products and exhibit booth design.

**SPECIAL THANKS TO ALL OUR CUSTOMERS WHO ATTEND
AND VISITED US AT LIGHT & BUILDING 2018.**
