

New members of the Vantage Fixture Alliance

Luxury homes deserve luxury lighting and precision control. Specialty Lighting is proud to become the newest member of the Vantage Fixture Alliance.

With the dizzying array of LED sources, drivers, control protocols and control systems, the Alliance program provides rock solid data to assure you know the exact performance of the system in your home. Specialty Lighting and its most popular family, Graffiti, have rigorously tested our product options with a connected Vantage control system. This data provides the Vantage installers all the requisite settings for smooth, deep dimming with Specialty Lighting products.

"Great lighting is a team effort" said Awi Salomon, EVP at Specialty Lighting. "From architectural design through the fixture installation to the commission of the controls, many stakeholders are involved. Specialty Lighting is committed to all parts of the design build chain to assure flawless integration. Control system compatibility is a significant key, and we are excited to become a Vantage Fixture Alliance partner."

Lighting fixtures in perfect alliance.

Interior lighting can enhance the living experience with simple planning and vision. But without the right lighting fixtures and control in place, spaces fall short of their potential.

What is the Fixture Alliance?

Legrand has created an alliance with leading lighting fixture manufacturers to offer simple control of the industry's widest selection of color-tunable fixtures with the Vantage lighting control solution.

Who's in it?

What are the benefits?

Freedom of Design

Choose the fixtures that you want and rest easy that your lighting designs will come to life as imagined.

We test and create fixture profiles in the Vantage software for the most popular tunable fixtures with accurate color mapping to ensure proper CCT output. You can focus on the design and we focus on making it come to life.

Vantage views all fixtures as equal. Our fixture profiles unlock the full functionality of every fixture we support. If there are tunable fixtures not yet added to our library - let us know and we will test them and add them to the list.

Fixture Testing

We test every fixture and create tunable profiles to take the guesswork out of control.

There is no need to determine how to get smooth dimming from 0 to 100% or CCT from warm to cool.

We create fixture profiles by testing fixtures from each of fixture alliance members. We take the guesswork out of configuring the fixtures in our software. The built-in profiles ensure that the fixture performs accurately and your design intent is met. Our fixture library is large and continuing to grow.

Calibrated CCT Alignment

During our testing process, we analyze each fixture and create color mapping tables.

This allows the dealer to program fixtures to go to a specific Correlated Color Temperature (CCT) value and to have multiple fixture models in the same room or the entire home that are all aligned to a shared CCT value.

About Specialty Lighting:

Specialty Lighting, established in 1993, is a vertically integrated architectural lighting manufacturer in Ocean, NJ. We invent, design, manufacture and create innovative lighting solutions to enhance the lit environment, while remaining steadfast in the sustainability effort. We have vast capabilities to customize our products to meet the challenging needs of architecture while capturing the vision of the lighting designer.

We are an independent family-owned company, supported by a team of committed and enthusiastic professionals. We support every project from design through completion
